

Camp Echo Backup Generator

Here's Property Manager Rob Johnston with our newly-installed backup generator, a diesel-powered 3-phase 480-volt 250-Kw Cummins unit, capable of running the entire camp in the event of a power failure. We negotiated the purchase of a like-new 1994 unit from Gerber Hospital in Fremont for \$8,000. A similar unit would be \$32,000 new, or \$24,000 used on the used market.
